■ Large inclination conveyor belt

Large inclination conveyor by the baseband, ribs, diaphragm is composed of 3 parts. Ribs are used for prevents material slide down. For ease of bypassing the drum, corrugated baffle edge design; diaphragm is the role of the carrier material, in order to achieve the large transmission angle, using T-TC type. File edges and cross baffles are connected by two vulcanization method and the base, has a very high connection strength. Fast installation, large conveying angle , small footprint, reduction of construction investment, flexible layout, small amount of maintenance, low energy consumption.

■ Product Features (ordinary type large angle corrugated sidewall conveyor belt)

- 1, increases the conveying angle (30 ~ 90 degrees);
- 2, small footprint, low investment;
- 3, large conveying capacity, high lifting height;;
- 4, from horizontal to inclined (or vertical) can be a smooth transition;
- 5, suitable for conveying easily spilled powder, granular, small block, paste and liquid-like material;
- 6, low energy consumption, simple structure, high strength adhesive tape, long service life.
